

## Db2 z/OS System Administration

This class teaches how to install, migrate and administer Db2. System components such as logs, BSDS and catalog/directory are detailed. Topics regarding storage, memory, CPU, specialty engines and performance and tuning are covered from a systems perspective.

- Installation, migration, continuous delivery/function levels
- Security and connectivity
- Storage and memory
- Logs, BSDS, DSNZPARMs, SMP/E
- Catalog and directory
- CPU and specialty engines (zIIPs)
- Db2 commands
- Maintaining, loading and reorganizing data
- Database backup/recovery and disaster recovery
- Data sharing implementation, performance and recovery
- Distributed access (DDF admin) and functionality
